

PRODUCT OVERVIEW

NextStone is a synthetic rock face panel product, made of a unique “closed cell” polyurethane with UV inhibitors. The panel’s remarkably realistic rock look is a result of special coatings which are chemically bonded to the molded surface of the panel. On the panel’s reverse side, weep channels and recessed air chambers are designed to allow airflow and reduce moisture build up.

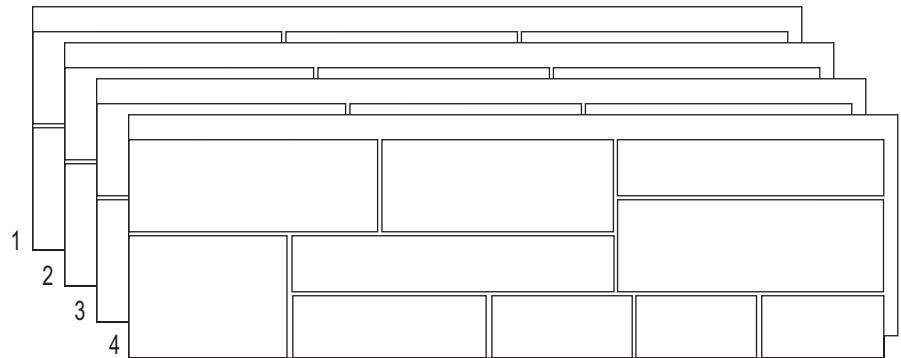

- Light weight, durable panels with the look and feel of real rock
- Interlocking tongue and groove panels hide all screw heads
- Panels can be shaped and cut with common woodworking tools

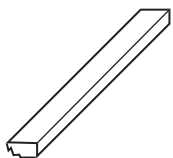

The NextStone Dry Stack panels come in 8 different patterns with 16 panels per box.

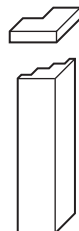

The NextStone Random Rock panels come in 4 different patterns with 4 panels per box.
